TOPIC 3: What are my job functions in the future?

TOPIC 4: What does the Qualification require?

TOPIC 5: What knowledge and skills do I need?

Introduction

Hey there! Welcome to the online course of CSS!

As many of today's basic functions are being simplified by technology, computers have been on the forefront in developing innovations through its many functions.

Many of the things that we thought were impossible before are now being achieved by computers nowadays.

In this digital economy, having the knowledge and skills in computer servicing is the start and most fundamental of all.

TOPIC 1: Why is CSS relevant?

In today's industry, almost every establishment needs the assistance of technology.

Even establishments and businesses are now gearing towards the use of **information technology** to promote their services.

The demand for people who offer computer servicing and repair **continues to increase** as society rapidly changes.

Repair

Monitoring

Maintenance

**Demand for
service providers**

For example

- Computer hardware need maintenance services in order to repair normal wear and tear.
- Network infrastructures used by organizations will need maintenance and monitoring.
- Computer equipment would need occasional repair and maintenance; thus, requiring the assistance of computer systems service providers.

Commonly, the industry's main line of business is on selling computer hardware systems and components, as well as providing repair and installation services.

Thus, if you were to venture in this industry, you must be well informed on basic concepts related to computer systems servicing.

TOPIC 2: What jobs can I land on?

Since society is now becoming more technology-driven and technology-dependent, it is no wonder that more and more establishments are in need of the expertise of computer service providers.

The Computer Systems Servicing National Certificate (NC II) Qualification trains its learners with competencies that will allow them to diagnose and troubleshoot PC systems and software issues, as well as restoring its parts to return the device to its normal function.

A person who has achieved the Computer Systems Servicing NC II Qualification is competent to be a:

**Computer
Assembler**

**Computer Service
Technician**

**Network
Technician**

**Technical
Support
Staff**

**Computer
Maintenance
Technician**

**Computer
Repairman**

TOPIC 3: What are my job functions in the future?

Computer Assembler

Responsible for producing components and assembling computer parts.

Computer Service Technician

This job may include setting up hardware and configuring software and drivers. Other tasks may be maintaining and repairing technological equipment as well as computer peripheral devices.

Network Technician

An information technology professional responsible in building and troubleshooting computer networks.

Technical Support Staff

This position can be very in demand in various organizations and/or business establishments. A technical support staff may be in charge maintenance of computer systems, installation of devices and software, and configuration.

Computer Maintenance Technician

Has a more diverse set of skills, but is responsible for maintaining and providing technical support to overall daily computer performance.

Computer Repairman

This position may be common to computer related businesses that provide repair and maintenance services. This job requires extensive knowledge on diagnosing and repairing different devices that will be brought to them.

TOPIC 4: What does the Qualification require?

Because technology also changes rapidly, computer technicians must be updated with the current trends, technology, and developments related to the computer industry. In addition to that, computer staff may need to work with various people that will require their expertise. Thus, the ability to work in groups and the ability to translate technical information to non-technical users may be required when working in this field.

*Having a **CSS NC II** qualification is an entry point for a career in the computer field.*

Being a computer technician may require you to travel to see clients or be at an office and workplaces as a member of the IT support team. As a technician, you must possess the **interests and skills** that the job demands.

TOPIC 5: What knowledge and skills do I need?

As much as possible, you will need some prior knowledge and skills so that you will be able to perform computer servicing easily.

Knowledge

- ☒ Hardware, including old & up-to-date systems, and essential software
- ☒ Electrical safety and hazards
- ☒ Operating systems

Skills

- ☒ Customer service and communication skills
- ☒ Systematic approach to solving problems
- ☒ Ability to meet deadlines
- ☒ Ability to squat, bend, and reach to repair equipment
- ☒ Able to lift at least 50 pounds of computer components
- ☒ Able to stand for long periods of time
