TOPIC 2: Checking Device Driver Installation

H5P: Single choice and T/F Self Check!

Introduction

This is an essential step that you need to be aware of after installing an operating system. Basically, the device drivers tell your operating system how to use the components like the motherboard, graphics card, network interface cards, sound cards, and other devices.

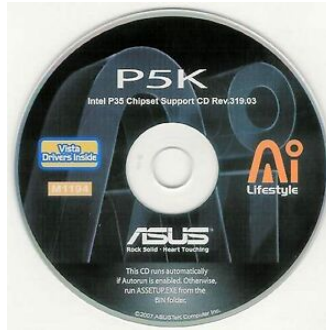

Most of the time, Windows would be able to recognize a device and will install drivers automatically. Some cases would require to install generic drivers.

Drivers – small software programs that help the operating system use the device. When a device is malfunctioning, one should ask whether the right driver has been installed.

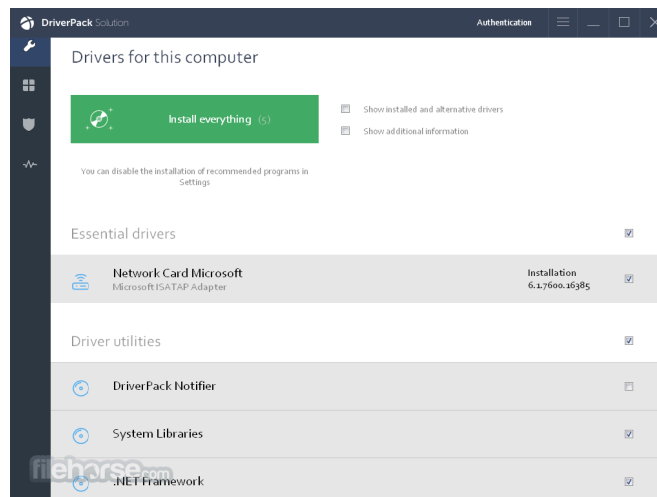

TOPIC 1: Installing Device Drivers

There are several ways to install device drivers for your newly installed components:

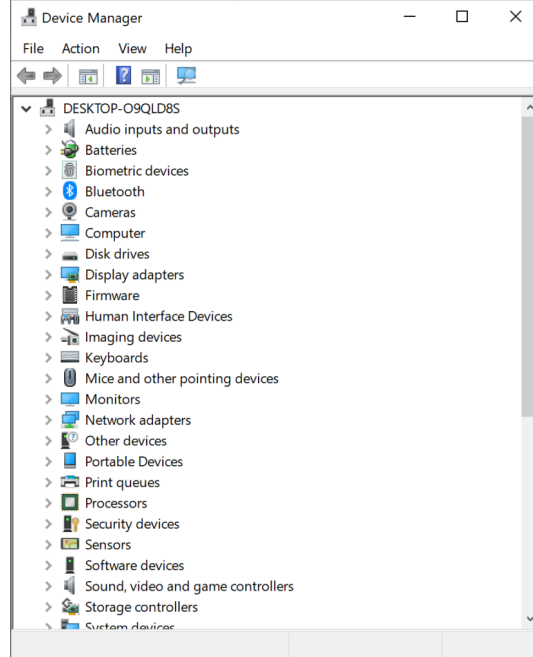

1. Manufacturer's DVD Installer – Provided upon buying a computer, laptop, device

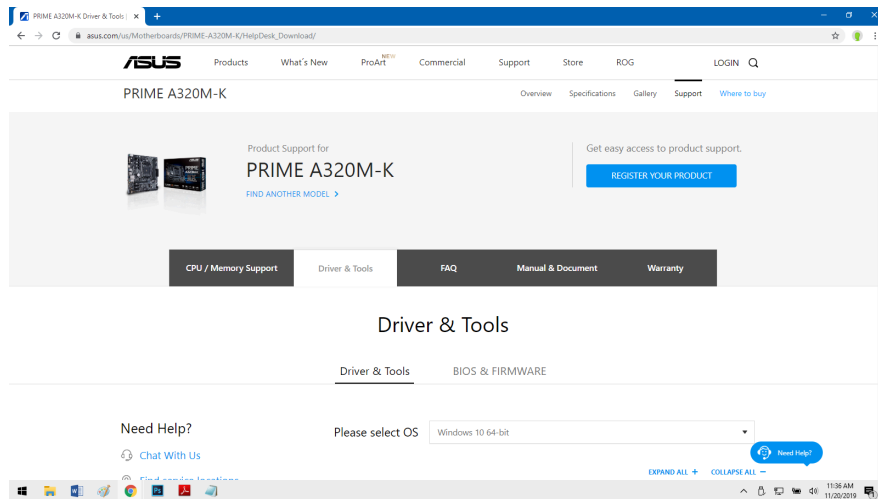

2. Driverpack Solution – A free tool which automatically finds proper drivers for a computer, then downloads and installs it without wizards or installation prompts.

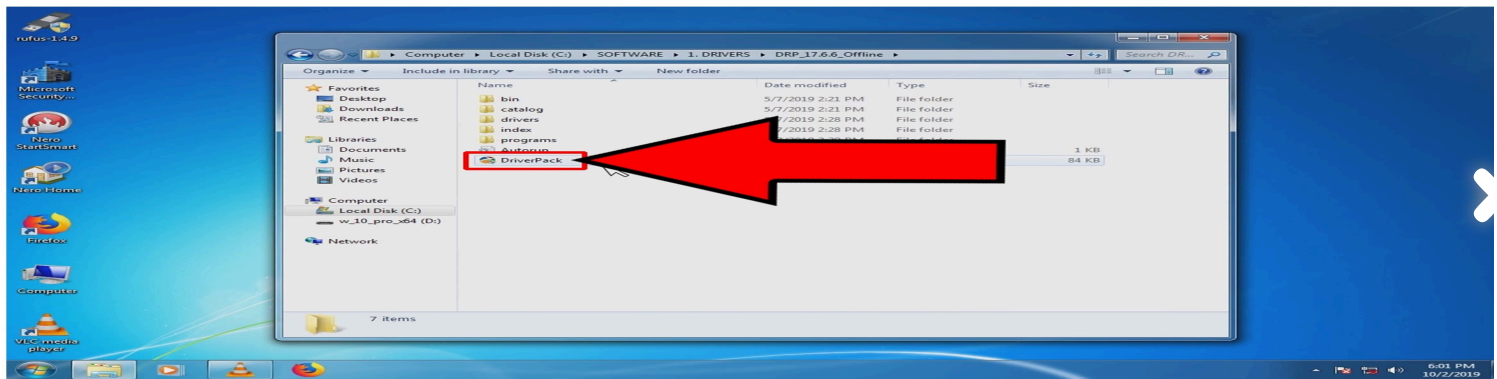

3. Device Manager (Driver Update) – Can be accessed by clicking Start > Computer > Manage > Device Manager. From here, each component can have the option to install a driver through a CD or through searching automatically online.

4. Download Online – Look for unit's Model Name and Number

TOPIC 2: Checking Device Driver Installation

After installation, you would want to see if you've installed the correct device drivers to avoid any issues that may hinder the component from running in its full performance.

In this simple procedure, we are looking if there drivers are already installed. If the device driver is installed, updating it through the device manager would prompt to say that the drivers are installed.

1. Open the Control Panel.
2. Select System and Security.
3. Click System and select Device Manager from the left side.
4. Click "Monitor" and you will see that a generic monitor is installed.

H5P: Single choice and T/F Self Check!

It is a free tool which automatically finds proper drivers for a computer, then downloads and installs it without wizards or installation prompts.
